## Section 1 ELECTRICAL CONNECTIONS

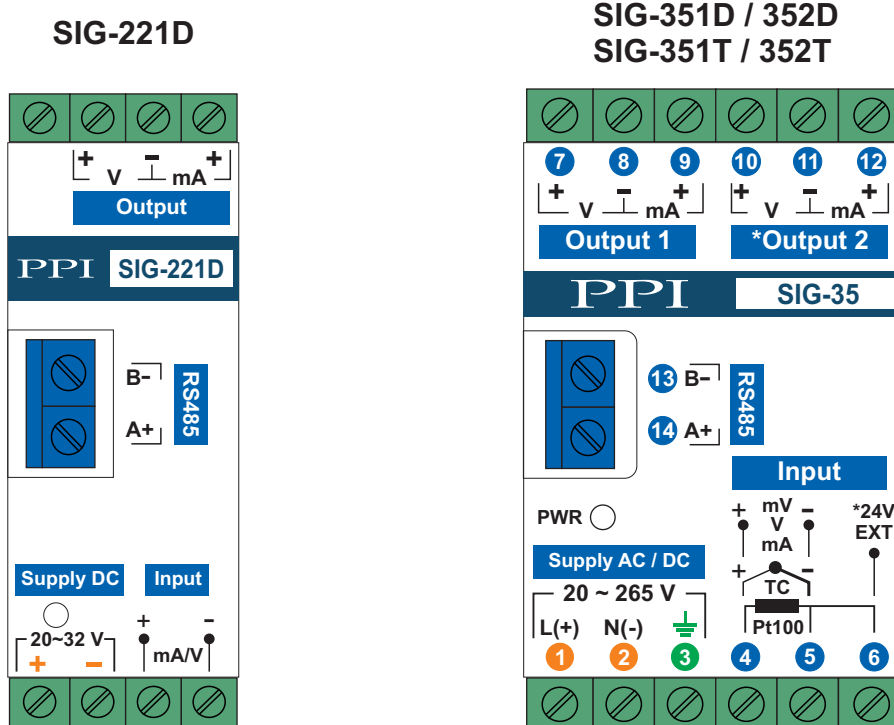

**WARNING**  
MISHANDLING / NEGLIGENCE CAN RESULT  
IN PERSONAL DEATH OR SERIOUS INJURY.

1. The user must rigidly observe the Local Electrical Regulations.
2. Do not make any connections to the unused terminals for making a tie-point for other wires (or for any other reasons) as they may have some internal connections. Failing to observe this may result in permanent damage to the indicator.
3. Run power supply cables separated from the low-level signal cables (like RTD, Thermocouples, DC Linear Current / Voltage etc.). If the cables are run through conduits, use separate conduits for power supply cable and low-level signal cables.
4. Use appropriate fuses and switches, wherever necessary, for driving the high voltage loads to protect the module from any possible damage due to high voltage surges of extended duration or short-circuits on loads.
5. Take care not to over-tighten the terminal screws while making connections.
6. Make sure that the module supply is switched-off while making/removing any connections.

### CONNECTION DIAGRAM

The Figure 1.1 illustrates Electrical Connection Diagrams.

*Figure 1.1*

## INPUT CONNECTIONS

### DC Linear Current / Voltage (mA / mV / V)

Use a shielded twisted pair with the shield grounded at the signal source for connecting mA / mV / V source. Connect common to terminal (-) and the signal to terminal (+), as shown in **Figures 1.2(a), 1.2(b), 1.2(c) & 1.2(d)**.

#### Models : 351D & 352D

#### Models : 351T & 352T

#### Model : 221D

### Thermocouple

Connect Thermocouple Positive (+) to terminal 4 and Negative (-) to terminal 5 as shown in **Figure 1.3**. Use the correct type of Thermocouple extension lead wires or compensating cable for the entire distance ensuring the correct polarity throughout. Avoid joints in the cable.

#### Models : 351T & 352T

### RTD Pt100, 3-wire

Connect single lead end of **RTD** bulb to terminal 4 and the double lead ends to terminals 5 and 6 (interchangeable) as shown in **Figure 1.4**. Use copper conductor leads of very low resistance ensuring that all 3 leads are of the same gauge and length. Avoid joints in the cable.

#### Models : 351T & 352T

## OUTPUT CONNECTIONS

Models : 351D & 352D  
351T & 352T

Model : 221D

## POWER SUPPLY

Figure 1.6

Models : 351D & 352D  
351T & 352T

Model : 221D

**Note :**  
The model SIG-221D operates on 20 to 32 VDC.

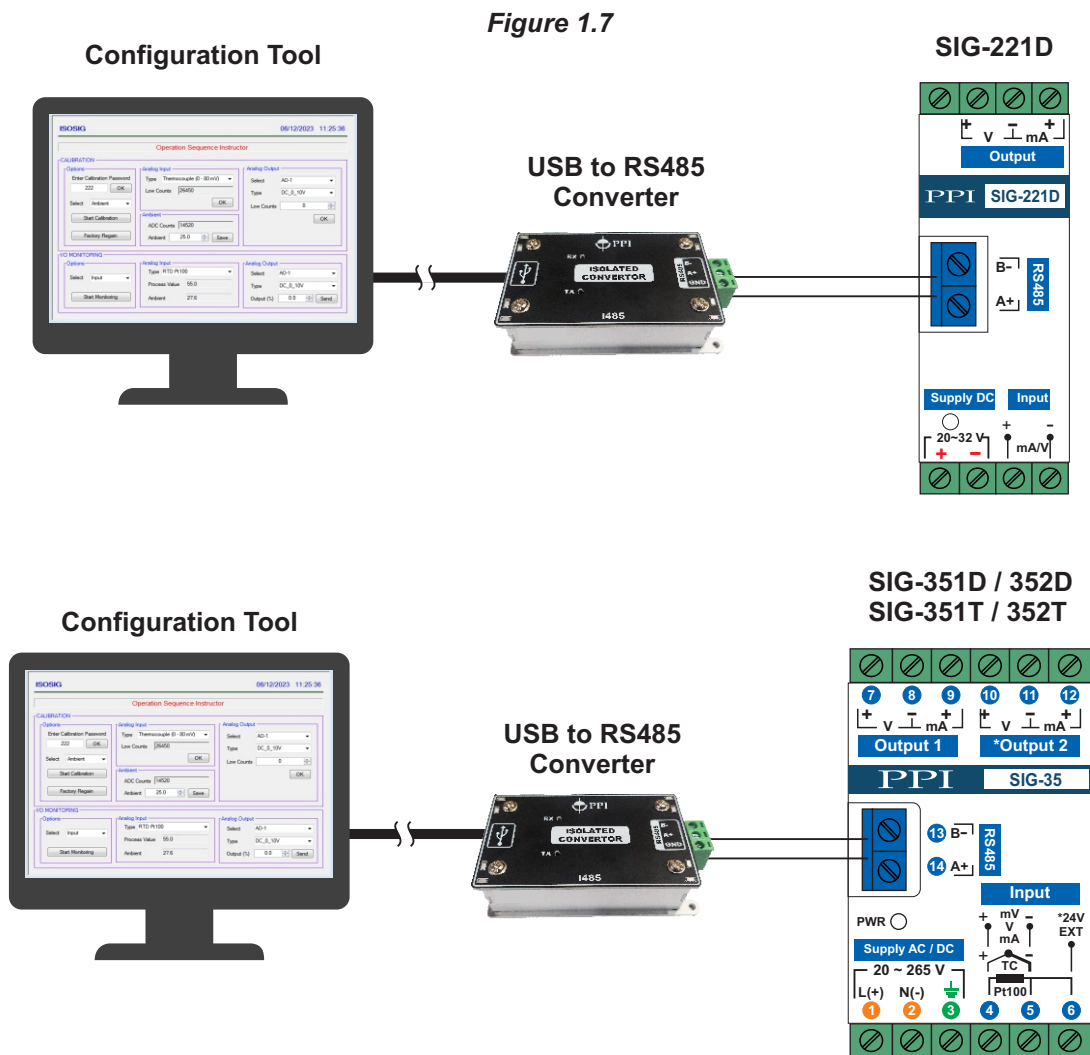

The models SIG-351D / 352D / 351T / 352T operates on both AC & DC Voltage; 20 to 265 VAC/DC.

The accuracy / performance of the Module is not affected by the variations in the supply within specified limits. Use well-insulated copper conductor wire of the size not smaller than 0.5mm<sup>2</sup> for power supply connections ensuring proper polarity as shown in Figure 1.6. The Module is not provided with fuse and power switch. If necessary, mount them separately. Use a slow blow fuse rated for 0.5A current.

**For safety and enhanced electrical noise immunity, it is highly recommended to connect Main Power Supply 'Earth' to the terminal provided for earthing connection.**

## SERIAL COMMUNICATION PORT

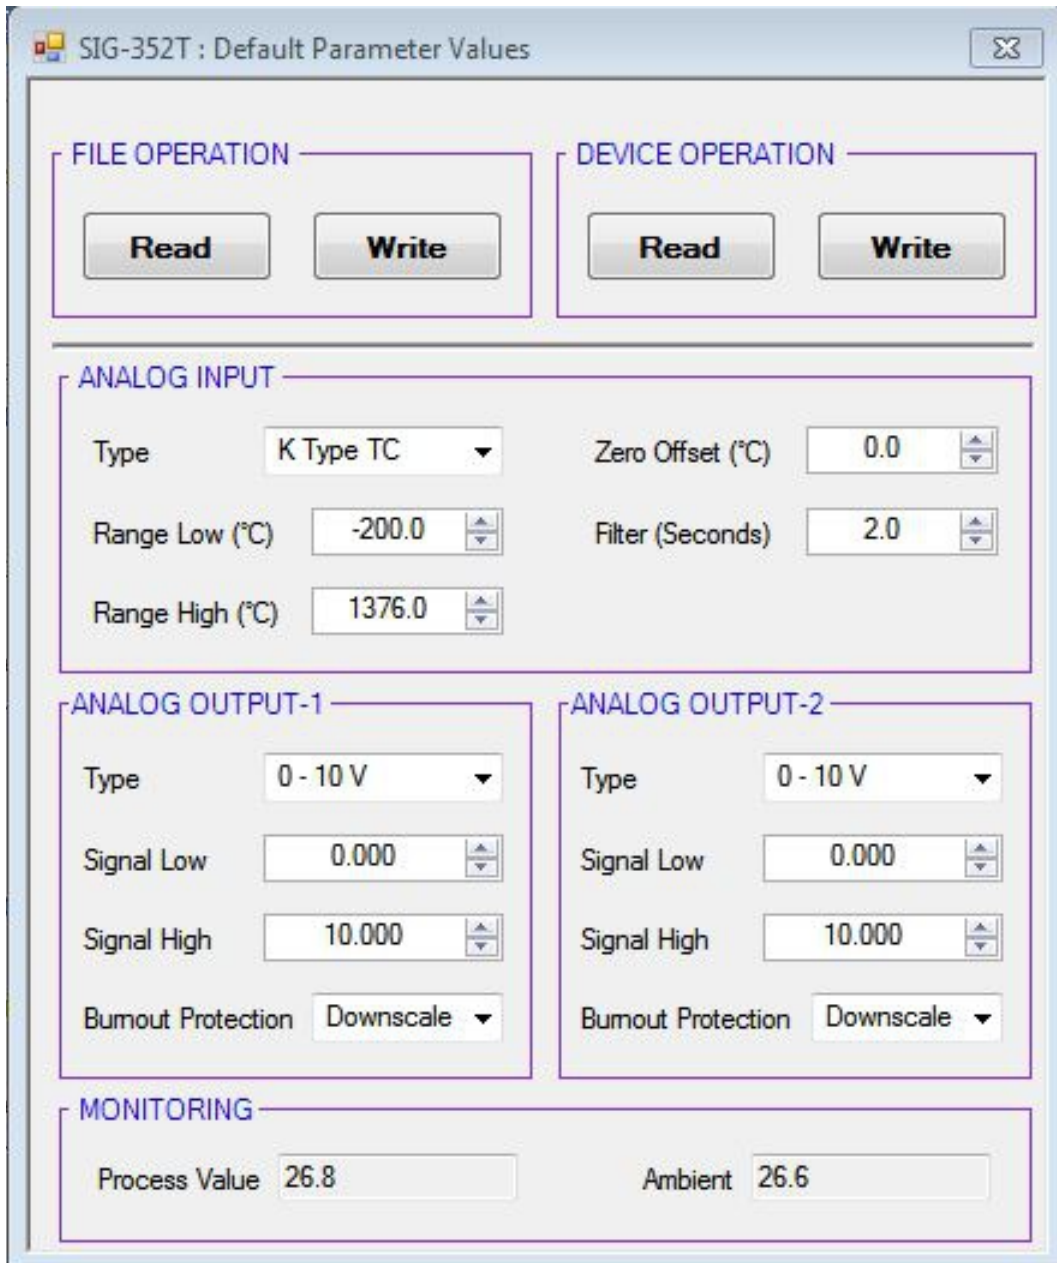

The wiring connections for connecting the module to the PC for Configuration / Calibration is shown in the figure 1.7.

## Section 2 PARAMETERS

The Modules can be configured for a variety of Input and Output types depending on the models. A PC based Configuration & Calibration Software Tool is available for download (free of cost) from the website.

The table 2.1 below describes the various settable parameters with their respective ranges / options.

**SIG-352T : Default Parameter Values**

FILE OPERATION		DEVICE OPERATION	
<b>Read</b>	<b>Write</b>	<b>Read</b>	<b>Write</b>

### SIG-351D / 352D SIG-351T / 352T

**Overall Dimensions : 35(W) X 75(H) X 107(D), mm**

## Section 4

### PC BASED DEVICE SETUP UTILITY

#### OVERVIEW

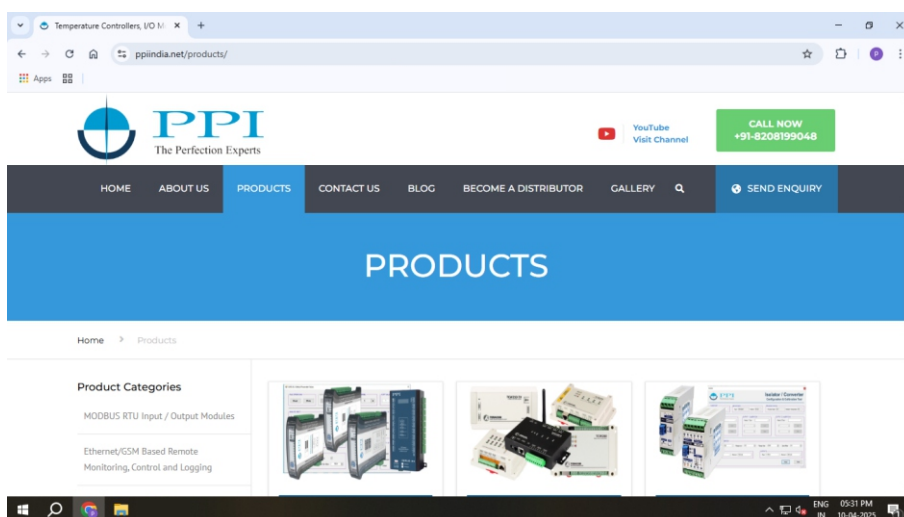

**UniSet** is a free Windows-based configuration utility developed by PPI to simplify the setup, parameter configuration, and monitoring of its MODBUS-compatible product range. It eliminates the need for manual MODBUS commands and streamlines device commissioning and testing.

This utility offers a quick, reliable, and user-friendly interface for configuring and validating this device during initial setup and field deployment.

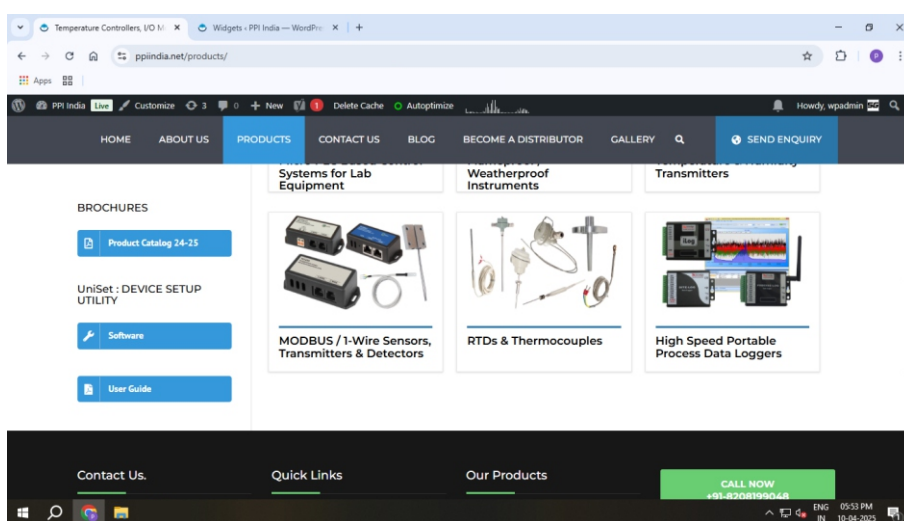

#### 4.1 DOWNLOADING THE SETUP TOOL

The tool is available for **free download** from the **PPI website** and can be accessed from the **PRODUCTS** section. To download and launch the tool:

1. **Visit** [www.ppiindia.net](http://www.ppiindia.net) and click on the **PRODUCTS** tab in the main navigation menu.

2. In the **left-hand panel**, scroll to **UniSet : Device Setup Utility**.

3. Two buttons will be visible under this section:

- **Software** – Click to download the configuration utility archive (IO-Module-Configuration-Tool.rar).
- **User Guide** – Click to download the PDF manual for reference.

4. After downloading the archive file:

- Extract the contents into a folder (e.g., IO-Module-Configuration-Tool).
- Open the folder and double-click on IO Module Configuration Tool.exe to launch the application.

The **UniSet** interface for this device includes the following key task panels:

## 4.2 PARAMETER SETTINGS

Used to configure device-specific channel parameters. Users can load/save configuration files or write/read directly to/from the connected device.

## 4.3 ON-LINE I/O CALIBRATION

Allows users to calibrate analog inputs, analog outputs, and ambient temperature sensing - depending on the model variant.

---
